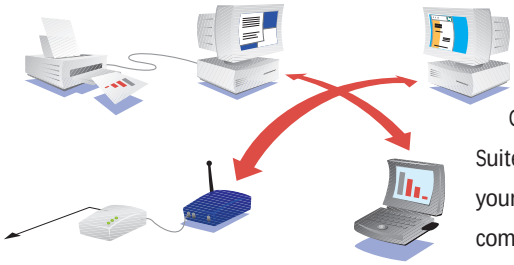
Symphony Cordless Ethernet Bridge

Simple, Reliable Home and Small Office Computer Networking Without Wires

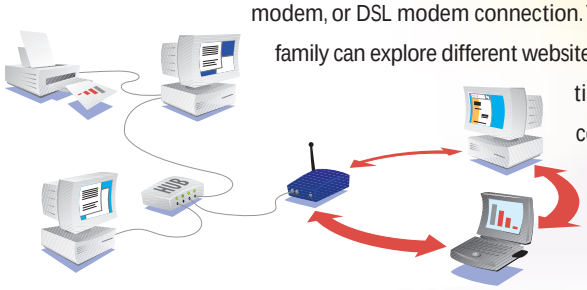
No Wires Needed—Network Computers Cordlessly

Connect your computers together without wires! Eliminate the hassle of opening up walls, climbing through your attic or stringing cables across the floor. With the Symphony Cordless Networking Suite you can network your desktop and laptop computers together, no matter where they are in your home or office. With a 150 foot range, Symphony covers most homes and small offices. And, because it is cordless, you can place your computers wherever you need them—not tied to a phone jack.



Save Money, Save Time—Share One Internet Connection Simultaneously

You've probably experienced the conflict of multiple people trying to get on the Internet at the same time—Dad wants to check stock prices, Mom wants to research the family vacation and Junior wants to get online and chat. End these Internet access frustrations with Symphony. The included Symphony Conductor™ application lets multiple people share one ISP account through an ISDN router, cable modem, or DSL modem connection. You and your family can explore different websites at the same time for the cost of only one ISP connection.



Extend a Wired LAN

With Symphony, adding wireless clients to your existing Ethernet network is as simple as plugging the Ethernet Bridge into a standard Ethernet hub using the included cable. Now, any laptop or desktop enabled with a Symphony Cordless adapter can access shared files, use network printers, and take advantage of the network's Internet access. And no technicians are necessary to help get it operating!

No Networking Knowledge Required

Symphony Composer™ installation wizard takes the entire hassle out of setting up your cordless network. From start to finish Symphony Composer guides you through the installation—setting up Internet sharing, printer sharing and file sharing for you. And, adding additional computers is easy.

Features	Benefits
• Simultaneous multi-user ISP sharing	High speed Internet access with one account
• No wiring between computers and Bridge	Computers may be placed anywhere, free from phone jacks
• Extend your existing LAN	Add PCs without installing wires

Members of the Symphony Cordless Family

With Symphony Cordless Networking products, you and your family can start enjoying fast, shared Internet connections, saving money by sharing printers, and having fun playing networked computer games—without wires! Using only one phone line and one ISP account, Symphony lets you explore different Internet sites from multiple computers at the same time. Access printers, drives, folders, and files from any computer on your cordless network. Share your existing modem or use the Symphony Cordless Modem for the ultimate cordless Internet access. Attach the Symphony Cordless Ethernet Bridge to an existing Ethernet network or a high-speed Internet access device like an ISDN router, xDSL modem, or Cable modem for the most flexible home and small office solution available.

Cordless ISA Card

For desktop PCs with an available ISA slot.

Cordless PCI Card

For desktop PCs with an available PCI slot.

Cordless PC Card

For laptop computer users with a PC Card Type II slot.

Cordless Modem

Optional stand-alone 56K modem for dial-up phone access for all Symphony-enabled computers. Instant setup—always on.

Copyright 1999, Proxim, Inc. Specifications subject to change without notice. Proxim Symphony products are covered by one or more of U.S. Patent Numbers 5,231,634, 5,412,687 and Des. 375,297. U.S. and international patents pending. Proxim, Symphony, the Symphony logo, Conductor, Maestro, and Composer are trademarks of Proxim, Inc. All other names mentioned are trademarks or registered trademarks of their respective owners. Product images may differ from actual product. Cost of sharing multiple PCs on a single Internet access account is subject to the terms and conditions of your ISP agreement. Radio data rate refers to the maximum signaling rate between two radios. Actual application throughput will be lower than 1.6Mbps due to protocol overhead. Products are only available for sale in countries where government approvals have been obtained.
